Transmitting signals between ISDN networks - dividing signals into cell packets and transmitting via ATM network to different ISDN network for decoding

Patent Assignee: SIEMENS AG (SIEI)

Inventor: ROMBACH H

Number of Countries: 010 Number of Patents: 006

Abstract (Basic): DE 4224388 C

The ISDN networks (SB) have associated ISDN narrow band communication systems (KS). Narrow band end devices (SBTLN) are connected to these. Signalling signals and information signals in the form of cells are transmitted in an ATM network (BB). The cells have a preamble and an information part.

The output signals from a calling end device (SBTLN) of a first network (SB1) are formed into packets in a first network transmission unit (IWU1). They are inserted into the information part of the cells. The cells are transmitted to at least one end device (SBTLN) of another network (SB2) via the ATM network (BB) through connections, via a second transmission unit (IWU2). The latter (IWU2) unpacks the cells and sends the signal contents to the receiving subscriber.

USE/ADVANTAGE - Esp. for information communication in office. Enables higher quantities of data to be accurately transmitted quickly and simply.

Dwg.1/1

Title Terms: TRANSMIT; SIGNAL; ISDN; NETWORK; DIVIDE; SIGNAL; CELL; PACKET; TRANSMIT; ATM; NETWORK; ISDN; NETWORK; DECODE
Derwent Class: W01

International Patent Class (Main): H04L-012/56; H04L-029/00; H04M-011/00
International Patent Class (Additional): H04L-012/66; H04Q-011/04
File Segment: EPI
